F/S Full-Stack

∞ Shipping mindset

ABOUT

Full-Stack Developer turning ideas into production-ready digital products. Operates across the entire stack. Lives by a build → ship → improve → repeat philosophy. Good engineering is also good design.

SKILLS

Frontend

React Next.js TypeScript JavaScript
Tailwind HTML5 CSS3

Backend

Node.js Express PHP PostgreSQL
MongoDB Prisma

Tools

Git Docker Vercel Figma Linux VS Code

OPEN TO

Full-time roles

Remote or on-site · worldwide

Freelance

End-to-end product development

Collaborations

Open-source & team projects

Startups

Looking for developers who ship

EDUCATION

BSc in Computer Science & Engineering

UBT — Pristina, Kosovo

02 ExploreKosova

LIVE

PHP web application for promoting tourism in Kosovo, featuring role-based authentication, tour management with media, and an admin dashboard. Built with an MVC-like architecture, PDO, and core security best practices.

PHP · MVC Architecture · PDO

Role-based Auth · Admin Dashboard

03 Project Alpha

WIP

New full-stack product in active development. React / Node.js / TypeScript ecosystem with production-grade architecture.

React · Node.js · TypeScript

In active development

TBA

WHAT I BUILD

- Full-stack web apps — from schema design to deployed UI
- Secure auth systems with role management & session control
- RESTful APIs & backend services in Node.js and PHP
- Dynamic CMS & admin dashboards with real-time analytics
- Responsive, accessible interfaces with modern CSS & React
- Production-hardened security — CSRF, PDO, password hashing

build() → ship() → improve() → repeat()
